## INTRODUCTION

Vertical soundings of ionosphere at Syowa Station, Antarctica, have been carried out by the Radio Research Laboratories through the sponsorship of the National Institute of Polar Research of Japan.

### LOCATION OF SYOWA STATION

Geographic		Geomagnetic	
Latitude	Longitude	Latitude	Longitude
69° 00.4'S	39° 35.4'E	69.8° S	78.2° E

### SPECIFICATIONS OF THE IONOSONDE USED AT SYOWA STATION

Items	Specications
Frequency Range	500 kHz–15 MHz
Transmitting Power	10 kW (peak value)
Duration of Sweep	30 sec
Transmitted Pulse Width	100 $\mu$ sec
Recurrence Frequency of Transmitted Pulse	50 Hz (by power source frequency)
Frequency Scale	every 1 MHz
Height Range	900 km
Height Scale	every 50 km
Total Receiver Gain	120 dB
Recording Method	35 mm film and video fax for ionograms
Power Supply	100 volt AC, 2.5 kVA
Transmitting Antenna and Receiving Antenna	30 m height vertical delta terminated by 600 $\Omega$ respectively

### SYMBOLS AND TERMINOLOGY

All symbols and terminology in the tables or figures of ionospheric data are used in accordance with the "URSI Handbook of Ionogram Interpretation and Reduction (Second Edition 1972)"

#### a. Characteristics of Ionosphere

$f_{xI}$	Top frequency of spread $F$ trace
$f_{oF2}$	
$f_{oF1}$	
$f_{oE}$	Ordinary wave critical frequency for the $F2$ , $F1$ , $E$ and $Es$ layers respectively
$f_{oEs}$	including particle $E$ layers respectively
$f_{bEs}$	Blanketing frequency of the $Es$ layer, e. g. the lowest ordinary wave frequency visible through $Es$
$f_{min}$	Lowest frequency which shows vertical ionospheric reflections
$M(3000)F2$	Maximum usable frequency factor for a path of 3000 km for transmission by $F2$ layer.
$h'F2$	
$h'F$	
$h'Es$	Minimum virtual height on the ordinary wave for the $F2$ , whole $F$ and $Es$ layers respectively.
Types of $Es$	See below b.(iii)

## b. Symbols

### ( i ) Descriptive Letters.

The following letters are entered after, or used to replace, a numerical value on the monthly tabulation sheets.

- A Measurement influenced by, or impossible because of, the presence of a lower thin layer, for example,  $E_s$ .
- B Measurement influenced by, or impossible because of, absorption in the vicinity of  $f_{min}$ .
- C Measurement influenced by, or impossible because of, any non-ionospheric reason.
- D Measurement influenced by, or impossible because of, the upper limit of the normal frequency range.
- E Measurement influenced by, or impossible because of, the lower limit of the normal frequency range.
- F Measurement influenced by, or impossible because of, the presence of spread echoes.
- G Measurement influenced or impossible because the ionization density of the layer is too small to enable it to made accurately.
- H Measurement influenced by, or impossible because of, the presence of stratification.
- K Presence of particle  $E$  layer.
- L Measurement influenced by or impossible because the trace has no sufficiently definite cusp between layers.
- M Interpretation of measurement questionable because the ordinary and extraordinary components are not distinguishable.
- N Conditions are such that the measurement cannot be interpreted.
- O Measurement refers to the ordinary component.
- P Man-made perturbation of parameters—Presence of polar spur traces.
- Q Range spread present.
- R Measurement influenced by, or impossible because of, attenuation in the vicinity of a critical frequency.
- S Measurement influenced by, or impossible because of, interference or atmospherics.
- T Value determined by a sequence of observations, the actual observation being inconsistent or doubtful.
- V Forked trace which may influence the measurement.
- W Measurement influenced or impossible because the echo lies outside the height range recorded.
- X Measurement refers to the extraordinary component.
- Y Lacuna phenomena, severe layer tilt.
- Z Third magneto-electronic component present.

### ( ii ) Qualifying Letters

The following letters are entered in the first column before a numerical value on the monthly tabulation sheets.

- A Less than. Used only when  $fbE_s$  is deduced from  $foE_s$  because total blanketing of higher layer is present.
- D Greater than.
- E Less than.
- I Missing value has been replaced by an interpolated value.
- J Ordinary component characteristic deduced from the extra-ordinary component.

M	Mode interpretation uncertain.
O	Extraordinary component characteristic deduced from the ordinary component.
T	Value determined by a sequence of observations, the actual observation being inconsistent or doubtful.
U	Uncertain or doubtful numerical value.
Z	Measurement deduced from the third magneto-electronic component.

(iii) Description of Types of *Es*

When more than one type of *Es* trace is present on the ionogram, the type for the trace used to determine  $f_{oEs}$  must be written first. the number of multiple traces is indicated after the type letter.

The types are :

- f An *Es* trace which shows no appreciable increase of height with frequency.
- l A flat *Es* trace at or below normal *E* layer minimum virtual height or below the particle *E* layer minimum virtual height.
- c An *Es* trace showing a relatively symmetrical cusp at or below  $f_{oE}$ .
- h An *Es* trace showing a discontinuity in height with the normal *E* layer trace at or above  $f_{oE}$ . The cusp is not symmetrical, the lower frequency end of the *Es* trace laying clearly above the high frequency end of the normal *E* trace.
- q An *Es* trace which is diffuse and non-blaketing over a wide frequency range.
- r An *Es* trace showing an increase in virtual height at the high frequency end similar to group retardation.
- a An *Es* trace having a well-defined fiat or gradually rising lower edge with stratified and diffuse tracedpresent above it.
- s A diffuse *Es* trace which rises steadily with frequency and usually emerges from another type *Es* trace.
- d A weak diffuse trace at heights below 95 km associated with high absorption and large  $f_{min}$ .
- n The designation 'n' is used to denote an *Es* trace which cannot be classified into one of the standard types.
- k The designation k is used to show the presence of particle *E*. When  $f_{oEs} > f_{oE}$  (particle *E*) the *Es* type precedes k.

c. Definitions of the CNT, MED, UQ and LQ

Median count (CNT) is the number of values from which a median has been computed. In addition to numerical values, the count may include certain descriptive letters.

Median (MED) of a set of numbers is the middle value when the numbers are arranged in order of magnitude, or the average of the two middle values if there is an even number of values.

Upper quartile (UQ) is the median value the upper half of the values when they are ranked according to magnitude ; the lower quartile (LQ) is the median value of the lower half.

d. *f*-plot.

*f*-plots of ionospheric data are illustrated only the periods of the Regular World Days of every month.
