COMMUNICATIONS RESEARCH LABORATORY

MINISTRY OF POSTS AND TELECOMMUNICATIONS

TOKYO, JAPAN

INTRODUCTION

This data book gives summarized results for vertical soundings of the ionosphere at Syowa Station, Antarctica in 1992. The observations were conducted by the Communications Research Laboratory under the sponsorship of the National Institute of Polar Research of Japan. The location of the station, specifications of the ionosonde and symbols used in this data book are as follows:

LOCATION OF SYOWA STATION

| Geographic | | Geomagnetic | |
|------------|------------|-------------|-----------|
| Latitude | Longitude | Latitude | Longitude |
| 69° 00.4'S | 39° 35.4'E | -69.8° | 78.2° |

SPECIFICATIONS OF THE IONOSONDE USED AT SYOWA STATION

| Items | Specifications |
|--|--|
| Frequency Range | 400 kHz-15 MHz |
| Transmitting Power | 10 kW (peak value) |
| Duration of Sweep | 20 sec |
| Transmitted Pulse Width | 80 μ sec |
| Recurrence Frequency of Transmitted Pulse | 50 Hz (by power source frequency) |
| Frequency Scale | every 1 MHz |
| Height Range | 900 km |
| Height Scale | every 50 km |
| Total Receiver Gain | 120 dB |
| Recording Method | 35 mm film and video fax for ionograms |
| Power Supply | 1000 volt AC, 2.0 kVA |
| Transmitting Antenna and Receiving Antenna | 30 m height vertical delta terminated by 600 Ω respectively |

DESCRIPTION

- a. All symbols and terminology in the tables or figures of ionospheric data are used in accordance with the "URSI Handbook of Ionogram Interpretation and Reduction (Second Edition 1972)"

- b. Ionograms data are printed in the quarter hourly of every days.

- c. Characteristics of Ionosphere

| | |
|-----------|---|
| fxI | Top frequency of spread F traces or oblique traces. |
| foF2 | Ordinary wave critical frequency for the F2 layer. |
| fEs(ftEs) | Top frequency of Es layer as reflected overhead. |
| fmin | Lowest frequency showing vertical ionospheric reflection. |
| h'F | Minimum virtual height of the ordinary wave F trace as a whole. |

Symbols

(1) Descriptive Letters.

The following letters are entered after, or used to replace, a numerical value on the monthly tabulation sheets.

- A Measurement influenced by, or impossible because of, the presence of a lower thin layer, for example, Es.
- B Measurement influenced by, or impossible because of, absorption in the vicinity of fmin.
- C Measurement influenced by, or impossible because of, any non-ionospheric reason.
- D Measurement influenced by, or impossible because of, the upper limit of the normal frequency range.
- E Measurement influenced by, or impossible because of, the lower limit of the normal frequency range.
- F Measurement influenced by, or impossible because of, the presence of spread echoes.
- G Measurement influenced or impossible because the ionization density of the layer is too small to enable it to be made accurately.
- H Measurement influenced by, or impossible because of, the presence of stratification.
- K Presence of particle E layer.
- L Measurement influenced by or impossible because the trace has no sufficiently definite cusp between layers.
- M Interpretation of measurement questionable because the ordinary and extraordinary components are not distinguishable.
- N Conditions are such that the measurement cannot be interpreted.
- O Measurement refers to the ordinary component.
- P Man-made perturbation of parameters—Presence of polar spur traces.
- Q Range spread present.
- R Measurement influenced by, or impossible because of, attenuation in the vicinity of a critical frequency.
- S Measurement influenced by, or impossible because of, interference or atmospherics.
- T Value determined by a sequence of observations, the actual observation being inconsistent or doubtful.
- V Forked trace which may influence the measurement.
- W Measurement influenced or impossible because the echo lies outside the height range recorded.
- X Measurement refers to the extraordinary component.
- Y Lacuna phenomena, severe layer tilt.
- Z Third magneto-electronic component present.

(ii) Qualifying Letters

The following letters are entered in the first column before a numerical value on the monthly tabulation sheets.

D Greater than.

E Less than.

J Ordinary component characteristic deduced from the extraordinary component.

M Mode interpretation uncertain.

O Extraordinary component characteristic deduced from the ordinary component.

T Value determined by a sequence of observations, the actual observation being inconsistent or doubtful.

U Uncertain or doubtful numerical value.

Z Measurement deduced from the third magneto-electronic component.

Definitions of the CNT, MED, UQ and LQ

Median count (CNT) is the number of values from which a median has been computed. In addition to numerical values, the count may include certain descriptive letters.

Median (MED) of a set of numbers is the middle value when the numbers are arranged in order of magnitude, or the average of the two middle values if there is an even number of values.

Upper quartile (UQ) is the median value the upper half of the values when they are ranked according to magnitude; the lower quartile (LQ) is the median value of the lower half.
